1. Write java program to display Fibonacci series up to a limit.

```
Class diagram:
Fib
~n1: int=0
~n2:int=1
~n3: int
~limit: int
~i: int
```

```
import java.io.*;
import java.util.*;
class Fib
{
    public static void main(String args[])
    {
        Scanner in=new Scanner(System.in);
        int n1=0,n2=1,n3,limit,i;
        System.out.println("ENTER THE
LIMIT:");
        limit=in.nextInt();
        System.out.print(n1+"\t"+n2);
        for(i=2;i<limit;i++)
        {
            n3=n1+n2;
        }
}</pre>
```

```
n1=n2;
n2=n3;
System.out.print("\t"+n3);
}
}
```

ENTER THE LIMIT:

5

0 1 1 2 3

2. Write java program to display Armstrong numbers within a range.

Class diagram:

Armstrong

~l: int

~h:int

~i: int

~rem: int

~sum: int

~num=int

```
import java.io.*;
import java.util.*;
class Armstrong
{
    public static void main(String args[])
    {
        Scanner in=new Scanner(System.in);
        int l,h,i,rem,sum,num;
        System.out.println("ENTER THE LOWER LIMIT

AND UPPER LIMIT:");
    l=in.nextInt();
    h=in.nextInt();
    System.out.println("ARMSTRONG NUMBERS:");
    for(i=l;i<=h;i++)</pre>
```

```
{
    num=i;
    sum=0;
    while(num!=0)
    {
        rem=num%10;
        sum=sum+(rem*rem*rem);
        num=num/10;
    }
    if(sum==i)
        System.out.println(i);
}
```

ENTER THE LOWER LIMIT AND UPPER LIMIT:

100

500

ARMSTRONG NUMBERS:

153

370

371

407

- 3. Write a program to perform base conversion
- a) Integer to binary
- b) Integer to Octal
- c) Integer to Hexadecimal

class diagram:

Base

~num: int

~rem:int

```
~base: int
~str: String
~dig[]: char
```

```
import java.io.*;
import java.util.*;
class Base
    public static void main(String args[])
        Scanner in =new Scanner(System.in);
        int num, rem, base;
        String str="";
        char
dig[]={'0','1','2','3','4','5','6','7','8','9','A'
        System.out.println("ENTER THE NUMBER:");
        num=in.nextInt();
        System.out.println("ENTER THE BASE TO
        base=in.nextInt();
        while (num>0)
            rem=num%base;
            str=dig[rem]+str;
            num=num/base;
        System.out.println(str);
```

```
output:
```

ENTER THE NUMBER:

10

ENTER THE BASE TO CONVERT:

2

1010

4. Write a program to merge two arrays.

```
Class diagram:
```

```
Merge

~m: int

~n:int

~i: int

~i: int

~j: int

~k: int

~a1[]: int

~a2[]: int

~a3[]: int
```

```
import java.io.*;
import java.util.*;
class Merge
{
    public static void main(String args[])
    {
        Scanner in=new Scanner(System.in);
        int m,n,i,j,k=0;
        int a1[]=new int[10];
        int a2[]=new int[10];
        int a3[]=new int[20];
        System.out.println("enter the size of array 1:");
        m=in.nextInt();
        System.out.println("enter the elements:");
        for(i=0;i<m;i++)
        {
            a1[i]=in.nextInt();
            System.out.println("enter the size of array 2:");
            n=in.nextInt();
        }
        System.out.println("enter the size of array 2:");
        n=in.nextInt();
    }
}</pre>
```

```
System.out.println("enter the elements:");
for (i=0; i<n; i++)</pre>
    a2[i]=in.nextInt();
i=0;
while(i<m&&j<n)</pre>
    if(a1[i] < a2[j])</pre>
         a3[k]=a1[i];
         a3[k]=a2[j];
if(i>=m)
    while(j<n)</pre>
         a3[k]=a2[j];
         k++;
if(j>=n)
    while(i<m)</pre>
         a3[k]=a1[i];
         k++;
System.out.println("after merging:");
```

```
output:
enter the size of array 1:
3
enter the elements:
10
30
50
enter the size of array 2:
2
enter the elements:
20
40
after merging:
10
20
30
40
50
```

5. Write a program to find the trace and transpose of a matrix.

Class diagram:

Matrix

~n: int

~m: int

~i: int

```
~j: int
~trace: int=0
~a[][]: int
~b[][]: int
```

```
a[i][j]=in.nextInt();
for (i=0; i<m; i++)</pre>
    for (j=0; j<n; j++)</pre>
         b[j][i]=a[i][j];
         if (i==j)
              trace=trace+a[i][j];
System.out.println("TRACE:"+trace);
System.out.println("TRANSPOSE");
for (i=0; i<m; i++)</pre>
    for (j=0; j<n; j++)</pre>
         System.out.print(b[i][j]);
    System.out.println(" ");
```

ENTER THE ORDER OF THE MATRIX:

3

3

ENTER THE ELEMENTS:

123

456

789

```
TRACE:15
TRANSPOSE
147
258
369
6. Write java program to find the sum of the digits and reverse of a given
number using class and objects
class diagram:
Ten
~num: int
~rem: int
~sum: int=0
~rev: int=0
~sumrev()
import java.io.*;
import java.util.*;
class Ten
     public static void main(String args[])
          Ten obj=new Ten();
          obj.sumrev();
     void sumrev()
          Scanner in=new Scanner(System.in);
          System.out.println("ENTER THE NUMBER:");
          num=in.nextInt();
```

```
num=num/10;
}
System.out.println("SUM:"+sum);
System.out.println("REVERSE:"+rev);
}
}
```

ENTER THE NUMBER:

123

SUM:6

REVERSE:321

7. Using class and objects, write a java program to find the sum of two complex numbers (Hint: Use object as parameter to function).

Class diagram:

Complex

~real: int

~image: int

add(complex c1, complex c2):Complex

```
import java.io.*;
import java.util.*;
class Complex
{
```

```
public static void main(String args[])
        Scanner in=new Scanner(System.in);
        Complex c1=new Complex();
        Complex c2=new Complex();
        System.out.println("ENTER THE FIRST
        c1.real=in.nextInt();
        c1.image=in.nextInt();
        System.out.println("ENTER THE FIRST
COMPLEX NUMBER:");
        c2.real=in.nextInt();
        c2.image=in.nextInt();
        c1.add(c1,c2);
    void add(Complex c1, Complex c2)
        Complex c3=new Complex();
        c3.real=c1.real+c2.real;
        c3.image=c1.image+c2.image;
System.out.println("SUM:"+c3.real+"+"+c3.image);
```

```
output:
```

ENTER THE FIRST COMPLEX NUMBER:

10

20

ENTER THE FIRST COMPLEX NUMBER:

30

40

SUM:40+60

8. Write a multi thread java program for displaying odd numbers and even numbers up to a limit (Hint: Implement thread using Runnable interface).

```
Class diagram:

Odd

~i:int

~n:int=10

+run:void

Even

~i:int

~n:int=10

+run: void

OddEvenThread

ob1:Odd

ob2:Even

import java.io.*;
import java.util.*;
class Odd implements Runnable
{
   int i,n=10;
```

```
import java.io.*;
import java.util.*;
class Odd implements Runnable
{
    int i,n=10;
    public void run()
    {
        for(i=1;i<n;i=i+2)
        {
            System.out.println("ODD:"+i);
        }
    }
}
class Even implements Runnable
{
    int i,n=10;
    public void run()
    {
        for(i=0;i<n;i=i+2)
        {
            System.out.println("EVEN:"+i);
        }
    }
}</pre>
```

```
class OddEvenThread
{
    public static void main(String args[])
    {
        Even ob2=new Even();
        Thread obj2=new Thread(ob2);
        obj2.start();
        Odd ob1=new Odd();
        Thread obj1=new Thread(ob1);
        obj1.start();
    }
}
```

ODD:1

ODD:3

ODD:5

ODD:7

ODD:9

EVEN:0

EVEN:2

EVEN:4

EVEN:6

EVEN:8
